

The Smart Care Cushion

simply sit down and relax your mind

Always know how you relatives are feeling!

We connect you with your loved ones and enable a more personalised care.

Watching our **loved ones** grow older, we realised that most care methods do not consider the special needs that go along with old age.

To elderly, living daily routines in a familiar environment is vital to maintain quality of life.

Therefore, we looked into their **everyday life**

and came to find, that they spend most of their time in their favourite chair watching TV, reading, sleeping etc.. Keeping this in mind, we developed an innovative technology which passively integrates into their home: the smart care cushion.

INDEPENDENCE

Give confidence in living alone by taking more control of personal health

INVISIBLE CARE

Monitor your loved ones' health without using intrusive methods

AT HOME

Enhance and support care in the elderly familiar surrounding

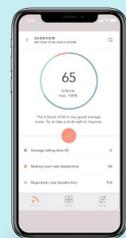

passive measurement

Patented sensor technology for any type of chair.

intelligent cloud computation

Encrypted health data is safely transferred and evaluated using unique algorithms.

health status in your pocket

Measured health data can be accessed by simply using the app on your phone.

The smart care cushion is the first seat cushion ever that evaluates **state of health**. It is based on a patented **sensor technology**, which is able to measure several vital parameters such as heart and breathing rates. This data is then encrypted and processed in a cloud, using our unique algorithms. All gathered information can be viewed by simply accessing the mobile application on your device. You want to share this data with your relatives or health care professional? No problem. Just share your exclusive chair ID. To ensure timely intervention in serious health conditions, everyone connected to the care cushion receives an alert notification on their device to seek professional medical attention.

Pursuing the overall aim of keeping people healthy

By replacing reactive sick care with proactive health care

Health care systems all around the world are struggling to provide their patients with the treatment required. With regard to our ageing society, this is an inefficiency which is no longer bearable.

The smart care cushion enables the health status to be checked continuously and

generates long-term data of seniors for the first time. Therefore, **deterioration of health** and critical events can be detected **proactively**, before radical symptoms occur. Ultimately, this does not only spare costs, but also unnecessary concerns, stress and time.

“When I grow old, I want to live in my home for as long as possible.”

A dream, many of us desire.

Growing old in a vastly evolving society is challenging and may even be overwhelming at times. Being aware of all the given challenges imposed on elderly in every day life, we have dedicated ourselves to make monitoring health as easy and transparent as possible.

HOW DO I GET CARE AS A SERVICE?

Visit and contact us on our website: www.visseiro.com

E-Mail: info@visseiro.com , Phone: +49 30 39772844

At Visseiro, we want to take responsibility for our elderly and care for them in a way that helps them regain their independence and respects ageing with dignity.
